

# GIVEN THAT 93% OF ALL EVIDENCE TODAY IS ELECTRONIC<sup>1</sup>....

## ... WHY ARE YOU STILL CARRYING HEAVY BOXES TO COURT?

*PowerPoint* wasn't designed to handle video depositions, 911 calls, computer simulations, e-mails, or other electronic-based evidence. For years you tolerated it, converting evidence into transcripts and foam board blow-ups you hauled into court.

**ExhibitView** changes all of that. Finally, there's one software you can use to manage your entire case lifecycle – from discovery to courtroom litigation.

Argue your case more effectively, more convincingly, using **ExhibitView** to:

- Organize all evidence in an electronic library stored on your laptop, CD, or DVD
- Create supporting slides
- Present both evidence and slides (even *PowerPoint*!) in any order, zooming in, highlighting, or displaying two pieces of evidence at once – side by side – to compare, provoke emotion, or demonstrate before-after effects.

Master **ExhibitView** in 30 minutes or less.
