

FOR IMMEDIATE RELEASE

Former NASA and UTMB-Galveston Security Expert Joins Zecurion as Chief Information Security Officer

30-year security veteran and trainer Ross Leo will serve as security advisor for Zecurion clients.

NEW YORK, November 9, 2009 - Zecurion Inc., an information security systems leader that protects business against insider threats, appoints 30-year information systems security and HIPAA veteran Ross Leo to the position of Chief Security Officer (CSO).

Securing proprietary corporate data from external attacks and insider theft is a job that's getting harder, says Zecurion CEO Alexey Raevsky. Cloud computing, virtualization, a complex regulatory environment, and increased internal theft risks are just a few concerns underscored in CIO's annual Global Information Security survey released earlier this month. Corporations see the threats and are responding in-kind by adding CISOs to their leadership teams, Raevsky says, but there's a lot of industry confusion around the perceived safety and risks; confusion that Leo is in a position to clear up.

"Leo's track record in IS, security, and HIPAA will be hugely beneficial to Zecurion and our customers. He oversaw security at several companies, including NASA and the University of Texas, and he has demonstrated industry leadership as executive director of the HIPAA Conformance Certification Organization and as HIPAA compliance and security trainer."

"My goal at Zecurion," says Ross Leo, "is to enable business success by preventing losses (which includes loss of revenue, customers, and stock value), and I'll do that by preventing the loss of data. When working with Zecurion customers, I'll employ the same practical approach I used when I was CISO, and that is to help them pursue a course of risk management that's cost effective, and that addresses their real risks and real threats. It's about finding the right solution for the right person."

About Zecurion

Zecurion is an award-winning, global enterprise security company that fights insider threats at multiple levels with its products: Zgate™, Zlock™ and Zserver® Suite. Their software secures and protects confidential data at the server level with adaptive multithreaded encryption and provides companies with unparalleled control over peripheral devices, as well as information sent via email. Zecurion's solutions are successfully protecting the internal assets and IP for more than 5,000 companies worldwide. Zecurion is led by an executive team experienced in developing security software and deployment across the enterprise.
